File: USPT

Oct 12, 2004

DOCUMENT-IDENTIFIER: US 6804661 B2

TITLE: Drug profiling apparatus and method

Detailed Description Text (104):

Referring now to FIG. 36, a "cognitive comprehension" study was conducted on a human subject who viewed a computer screen displaying a written sentence describing a situation in a picture scene such as "The horse is kicking the man." The subject first read the sentence and viewed a correct picture (such as the picture of the horse kicking the man) and also some incorrect pictures (such as the picture of the man sitting on the horse). The pictures were then presented sequentially (one at a time) on the screen while five channels of raw EEG data were recorded from the subject's scalp.
